

```
def test_mfa_method_not_available(monkeypatch, mocker):
    """
    Test that set_mfa_method raises MFAMethodNotAvailableError for invalid MFA type.
    """
    driver = mocker.Mock()
    monkeypatch.setattr(driver, 'find_element', mocker.Mock(side_effect=NoSuchElementException()))
    try:
        set_mfa_method(driver, 'NON_EXISTENT_MFA')
    except MFAMethodNotAvailableError as e:
        assert 'Multifactor Method' in str(e)
    else:
        assert False, "Expected MFAMethodNotAvailableError"
```

---Extra Details---

Filename: signIn.py

Description: Checks that attempting to set an unavailable MFA method raises correct exception.

Score: 88%

Alignment: 90%

Validation Notes: Validates negative path for MFA type selection. Ensures robust error handling for dynamic form states.
