```python
def test_get_email_code_returns_none_if_imap_fails(monkeypatch):
    # Raise an error on IMAP4_SSL
    class DummyIMAP:
        def __init__(self, *a,**kw): raise imaplib.IMAP4.error('fail')
    monkeypatch.setattr('imaplib.IMAP4_SSL', DummyIMAP)
    try:
        get_email_code('user','pw','server','INBOX')
        assert False, 'Should have raised RuntimeError on IMAP failure.'
    except RuntimeError as e:
        assert 'Unable to establish IMAP Client' in str(e)
```

---Extra Details---
Filename: signIn.py
Description: Ensures get_email_code raises RuntimeError if the IMAP connection cannot be established.
Score: 92%
Alignment: 93%
Validation Notes: Simulates IMAP connection failure to test email code retrieval error handling.
