```python
def test_get_email_code_with_invalid_imap_credentials():
    '''Test get_email_code handles IMAP login failure and raises exception.'''
    import pytest
    with pytest.raises(RuntimeError, match="Unable to login to IMAP Email"):
        get_email_code("bad_user", "bad_password", "invalid.server.com", "INBOX")
```

---Extra Details---
Filename: signIn.py
Description: Ensure get_email_code fails gracefully on IMAP login failure.
Score: 91
Alignment: 91
Validation Notes: Covers exception handling in get_email_code for invalid credentials or server.
